

ALEX MORGAN

Senior Data Scientist

Summary

Senior data scientist with **6+ years of experience** delivering machine learning solutions for forecasting, anomaly detection, and decision support in production environments.

Strong background in statistical modeling, feature engineering, experiment design, and model lifecycle management, with consistent focus on measurable business impact.

"Open to senior data science roles spanning applied ML, product analytics, and ML platform collaboration."

Experience

NOV 2024 –
PRESENT

Senior Data Scientist — Climate Intelligence Platform

Zurich, Switzerland

Python Pandas XGBoost PyTorch MLflow PostgreSQL Docker

- Built probabilistic forecasting models for weather and telemetry signals, improving alert precision and planning reliability.
- Designed feature pipelines for high-volume time-series data and standardized offline/online feature parity checks.
- Led model evaluation framework design, including drift monitoring and threshold tuning across multiple product domains.
- Partnered with product teams to translate model outputs into actionable operational dashboards.

NOV 2023 –
NOV 2024

Data Scientist — Mission-Critical Systems Company

Southern France

Python Scikit-learn TensorFlow SQL Airflow Docker

- Developed anomaly detection and ranking models to prioritize critical events in mission support workflows.
- Implemented reproducible training pipelines with model versioning and automated validation checks.
- Collaborated with domain experts to refine labeling strategies and improve signal quality for supervised learning tasks.

MAR 2020 –
AUG 2022

Data Scientist — Industrial Analytics Group

France

Python NumPy Scikit-learn Elasticsearch Tableau

- Built predictive maintenance models using equipment logs and sensor features, reducing unplanned downtime.
- Designed KPI frameworks and cohort analyses to support product and operations decision-making.
- Improved search and diagnostic workflows by combining statistical scoring with domain-specific heuristics.

Projects

ForecastLab

CitHub: github.com/example/forecastlab-template

Python LightGBM FastAPI DVC Streamlit

Built an end-to-end forecasting toolkit with training pipelines, model registry, and interactive evaluation dashboard.

- Implemented backtesting utilities, confidence interval calibration, and feature attribution reporting.
- Added automated data quality checks and experiment tracking for reproducible model development.
- Exposed model inference through a lightweight API and analyst-facing dashboard for scenario testing.

Education

M.Sc. in Data Science — European Institute of Technology

2018 – 2021

European Institute of Technology | Europe

Focus on machine learning, applied statistics, optimization, and large-scale data systems.

Skills

Technical Skills

Core Languages

Python SQL R Bash

Machine Learning

Scikit-learn XGBoost LightGBM PyTorch
TensorFlow

Statistics & Experimentation

Hypothesis Testing A/B Testing Time-Series Modeling
Bayesian Inference Causal Analysis

Data Engineering

Feature Engineering Airflow dbt Data Validation
ETL/ELT Pipelines

MLOps

MLflow DVC Model Monitoring Docker
CI/CD for ML

Analytics & Visualization

Tableau Power BI Matplotlib Seaborn Plotly

Collaboration & Delivery

Problem Framing Stakeholder Communication
Technical Documentation Agile Delivery Mentoring

Soft Skills

Structured analytical thinking
Clear communication of technical insights
Business-oriented prioritization
Cross-functional collaboration
Ownership from research to production

Languages

English — Fluent
French — Professional working proficiency
German — Basic

Interests

Applied AI research
Trail running
Data visualization design
Open-source ML tooling
